

Executive Summary – FNP Sales Analysis Dashboard

The **FNP Sales Analysis Dashboard** was developed using **Microsoft Excel** to analyze sales performance, customer purchasing behavior, delivery efficiency, and regional order trends for Ferns N Petals (FNP). The project focuses on transforming raw sales data into interactive and meaningful business insights that support strategic decision-making and performance monitoring.

The dashboard provides a centralized view of key business metrics, including **Total Orders (1000)**, **Total Revenue (₹35.2 Lakhs)**, **Average Customer Spending (₹3,520.98)**, and **Average Delivery Time (5.53 days)**. Through dynamic visualizations and slicers, users can explore sales patterns across occasions, product categories, months, cities, and order timings.

The analysis identified that occasions such as **Anniversary**, **Raksha Bandhan**, and **Holi** generated the highest revenue, highlighting strong seasonal demand during celebration periods. Category-level insights showed that **Colors**, **Soft Toys**, and **Sweets** contributed significantly to overall sales revenue, indicating customer preference toward gifting-related products. Monthly revenue trends revealed peak sales during festive months, especially in **February** and **August**, demonstrating the impact of seasonal campaigns and cultural events on business performance.

The dashboard also evaluates customer ordering behavior by analyzing revenue across different hours of the day, helping businesses identify peak order periods and optimize operational planning. Additionally, city-wise order analysis highlighted top-performing locations such as **Imphal**, **Dhanbad**, and **Kavali**, enabling better regional sales targeting and marketing strategies.

Interactive filters for **Order Date**, **Delivery Date**, and **Occasion** enhance usability by allowing users to perform customized analysis and drill down into specific business segments. The project emphasizes data cleaning, KPI tracking, trend analysis, and dashboard design principles to create a professional and user-friendly reporting solution.

Overall, this project demonstrates strong skills in **Excel Dashboard Development**, **Data Analysis**, **Data Visualization**, **Business Intelligence**, **KPI Reporting**, and **Insight Generation**. The dashboard helps stakeholders monitor sales performance efficiently and supports data-driven business decisions through clear and interactive reporting.
